

Start out in normal text. Now switch *from normal to italic text*. And back to Roman (normal). **Does BOLD get your attention? Then how about bold AND italic?** OK, too much excitement. Back to plain old Roman.

Take the default sans serif face, which is Helvetica. No? Then how about typewriter output (Courier)? Ανψ ιδεα ωηατ τηισ σαψσ, λικε ωηαζζυπ, δυδε? And this looks like the signs in the NYC subway. Back to the default face (Times).

And finally, I've got Georgia on my mind... a Windows core extension.

Start with the default face (core Times). The following fonts need to be loaded first. Switch to DejaVu Sans, also in *italic*, **bold**, **and both**. Now try out a Type 1 (PostScript) font named PalladioL, from URW. This should be ugly: X11 bitmapped Codec font. And finally, a sample of CJK (e.g., Chinese) text output: 使用這個（更白的牙齒）。
