Is there any easy way to make print (magazine) style sidebars in HTML? I mean something that is a block of text (and maybe other stuff) set off from the main text. Yeah, I know I

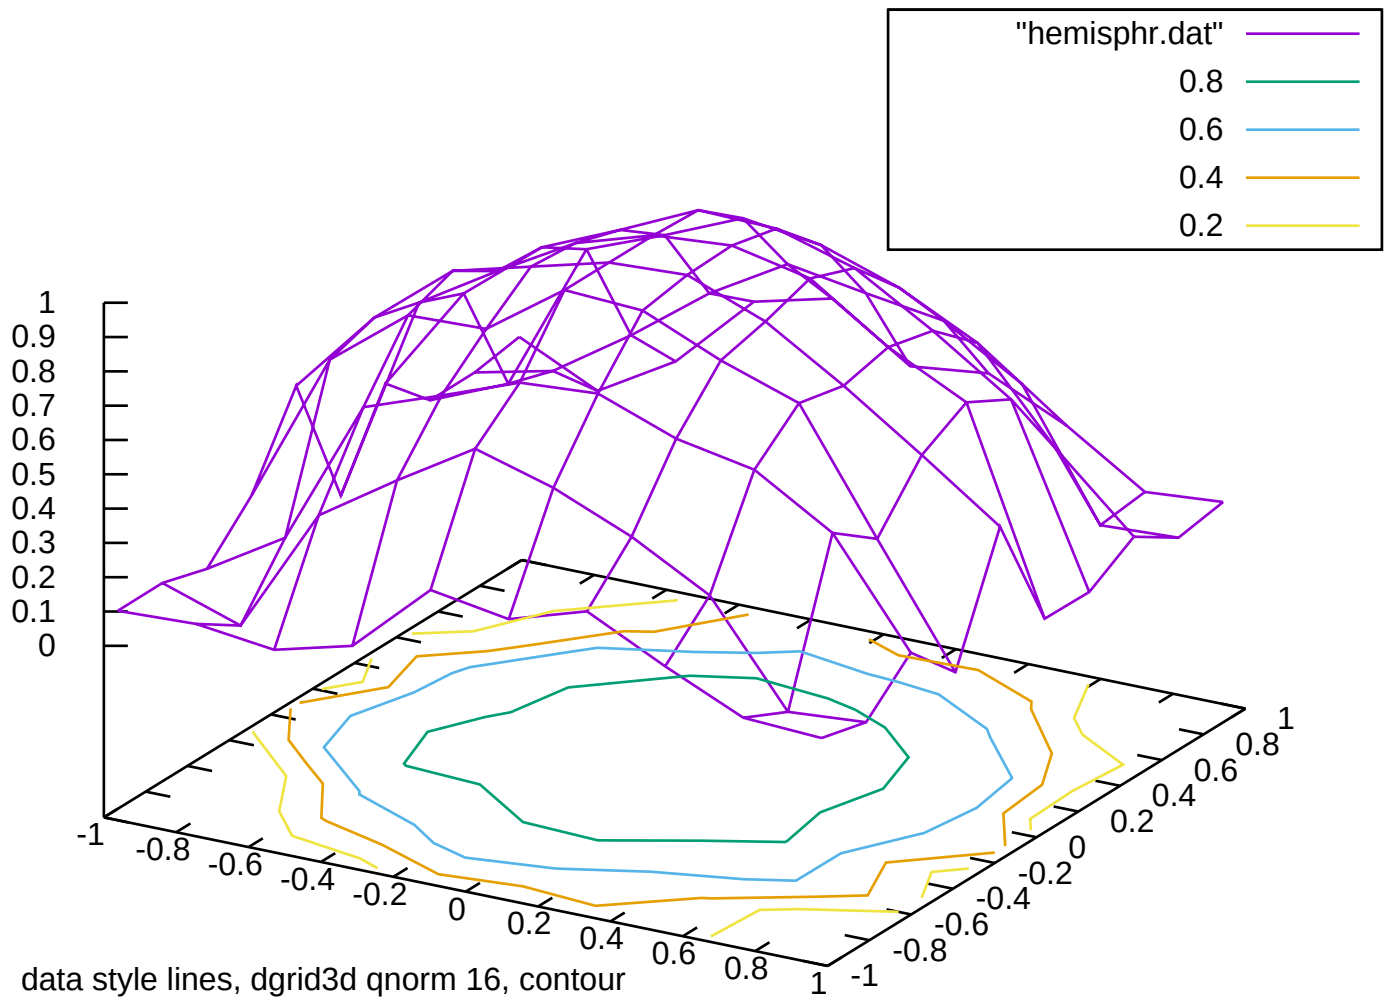

A Sidebar
blah blah blah
blah blah blah
something else

can just put in a link with target= to pop up a new window, but I'm trying for a traditional printed look. A block

that overlaps the main text area (extending into the "margin") would be great. I know how to use tables to make sidebars of indefinite length, but what I want is something of limited length that the main text flows around. I think I can get the lay out I'm after with <table>,
